Playing with 'Light and Shadow' – A Visual Dance of Contrast

Light and Shadow play a crucial role in shaping our perception of the world, adding depth and dimension to our surroundings. They not only enhance the visual appeal but also evoke emotions, create atmosphere and highlight the beauty of form and texture.

Grade 5 students playing with light and shadows, developing their spatial awareness, learning about shapes, sizes and dimensions. They also learned about cause and effect, discovering how moving an object in front of a light source changes the shadow it creates.
