

Shapes, Symmetry and Skilfulness!

Exploring the fascinating world of shapes through hands-on project

The learners of Grade 2, used colourful cut-outs of various shapes and assembled imaginative robots, integrating math concepts with art. The children enjoyed learning how to combine geometry with creativity, making the lesson both educational and fun. To add an extra layer of creativity, the learners used wool to craft different types of lines—straight, curved, and zigzag—giving their robots unique personalities and flair.
