

Learning Life Skills Through Mathematics

The students of Grade 4 turned into confident mini-shopkeepers, exploring money through playful activities using notes, coins, and cost price tags. They made smart choices and discovered the concept of profit and loss—skills that reach far beyond the blackboard into everyday life.

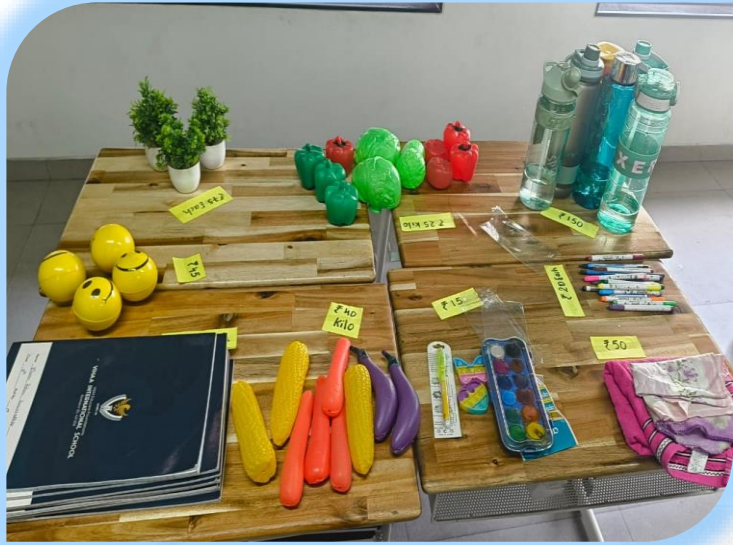

**Cost to
gain, each
rupee told—
A story of
learning,
bright and
bold!**

**With every
cost and
every sale,
they learned
to add and
subtract well.**

Nurturing financial awareness and smart thinking beyond the classroom.
